DETAILED ACTION

Response to Amendment

1. Applicants amendments, filed 11/24/2006, have cancelled claims 9 and 20, the only rejected claims in the case. Therefore no current claims stand rejected. Claims 1-8 and 9-19 remain pending in the instant application.

Allowable Subject Matter

2. Claims 1-8,10-19 are allowed.

3. The following is a statement of reasons for the indication of allowable subject matter: None of the prior art cited or reviewed by the examiner, alone or in combination, discloses the method of controlling the seed position by forming the layers as claimed, specifically oblique evaporating the second metal layer onto a first metal layer, wherein each of the first and second metal layers include a plurality of continuous openings to the substrate, with subsequent removal of the first and second metal layers.

The closest prior art for silicon seeds, US Patent 5447117, discloses accurately controlling the plurality of seeds on the substrate, but fails to suggest a masking method as claims.

The closest prior art for masking, US Patent 4256816 by Dunkleberger and US Patent 4448797 by Burnham disclose masking using a similar masking structure and subsequent removal of structure, but fails to suggest oblique evaporation and/or control of crystal seed deposition.

Conclusion
